

# Visy Glass

Recycled content update

April 2024

# Leading the industry in recycled glass content

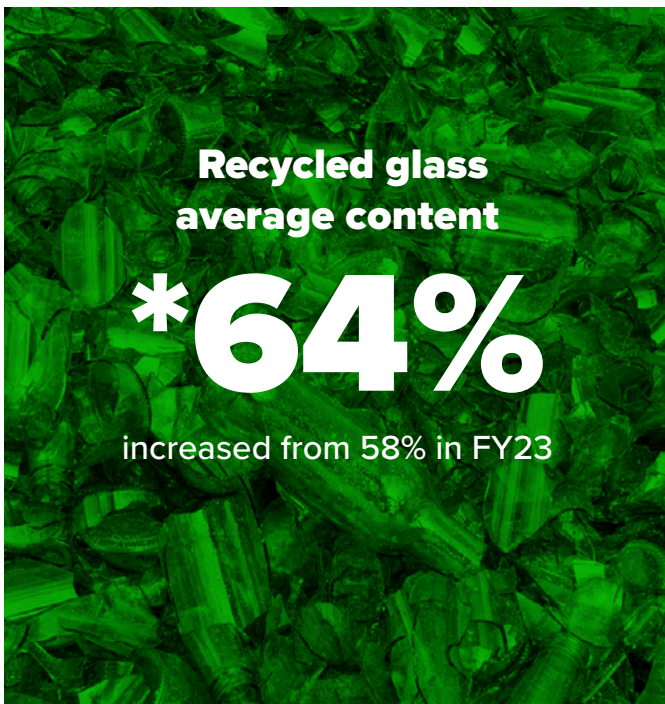

Visy's industry-leading average of 64% recycled glass in its packaging\* represents a 6% increase compared to the 2023 financial year.

The figure is higher for recycled coloured glass (amber and green) at 75%\*, with up to 90% recycled glass already in some of our green and amber bottles.

A Visy glass container with 70% recycled content uses up to 30% less energy to make than a container with no recycled content. This lower emissions product, keeps glass out of landfill, reduces our reliance on virgin material and helps your brand achieve your sustainability targets.

We are investing over half a billion dollars in glass recycling and remanufacturing to reach our 70% target.

It's better glass, **for a better world.**

## Recyclable

Visy recovers, re-processes and re-manufactures, powering the circular economy

## Reliable

We deliver unwavering quality and precision throughout the production and supply process

## Innovative

Leveraging cutting edge technology, our glass products fit all bottle and jar formats

## Add the Re+ symbol to your products

It represents that the product is made by Visy in ANZ, is made using some recycled content, and is recyclable in Australian and New Zealand kerbside bins.

Find out more about the Visy Re+ logo by contacting [marketing@visy.com.au](mailto:marketing@visy.com.au)

**Please note:** \* on average, across Australia and New Zealand operations in financial year 2024 to date.

Recycled content of products is not fixed and may alter from time to time due to changes in our supply chain. Visy does not guarantee a specific level of future recycled content which will depend on market availability of glass cullet for use by Visy's glass plants.
