What makes Visy Re+ Glass unique?

Visy glass is the ideal sustainable packaging solution and is recyclable again and again. Glass is made from predominantly natural ingredients: sand, limestone, soda ash and recycled glass, and can be made from more recycled bottles and jars than many other glass products. So much so that Visy Re+ Glass is raising the standard for recycled content in our glass packaging.

It's all about using more of what we already have to make new packaging. This means less waste, less pollution and lower energy consumption, helping to reduce our reliance on natural resources. All this adds up to lower carbon emissions which helps your brand meet its sustainability targets.

It's better glass, **for a better world**.

***Please note:** Recycled content figures are based on our Spotswood plant's average consumption of cullet, being both external glass and internal glass (for example, rejects, losses, obsolete or defective stock from our manufacturing process), in FY23 for the specified colours.

Recycled content of products is not fixed and may alter from time to time due to changes in our supply chain.
Visy does not provide any guarantee of future recycled content which will depend on market availability of glass cullet for use by Visy's glass plants.

More recycling, less landfill

Visy uses recyclable materials and re-makes them back into sustainable packaging

Visy owns the largest network of Material Recovery Facilities (MRFs) in Australia

Visy process recyclables from over **3.8 million** households and more than **8,700** commercial and industrial customers

In FY2023, we sorted and processed more than **1.8 million tonnes** of recyclables
